Caunda in a Ferment-Another Ministry. The Brown Ministry was snuffed out like a candle. The Premier appealed to Governor General Head to dissolve Parliament and order new elections, but Head was too old for that. Resignations followed, and the Governor Gen- egraph House, Valencia Ray, Ireland. eml is now denounced by the Opposition as bitterly as was the MacDonald administration. His course is prenousced arbitrary and unconstitutional. Mr. Brown, and Mr. Dorion the right hand man of the Premier of a day, have again entered the canvass for seats in the House. The Globe, the Opposition organ, thunders against " the double outrage of Parliament and His Excellency," and proclaims

The crisis is not ended, it has passed from one stage to another more complicated and dangerous. The conflict is not over; in its more serious aspects it is just begun. A sullen discontent pervaded the Province before, relieved only by a belief that Responsible Government, administered by an honest Executive, afforded constitutional means of relief. Intense excitement now runs through the country with the resistless force of a prairie fire, and who can undertake to predict the consequences of a trick which exhibits a Governor General in the light

Administration goes on. Mr. Galt is invited by Sir Edmund Head to form a Cabinet. He shrinks from the duty, and Mr. Cartier, of the MacDonald-Cartier Administration, undertakes the job. Here is the result, as officially announced on the 7th .- Premier and Attorney General East, Mr. Cartier; Inspector General, Mr. Galt; Provincial Secretary, Mr. Alleyn; Speaker of the Legislative Council, Mr. Belieau; Public Works, Mr. Sicotte , Solicitor General East, Mr. Rose; Attorney General West, Mr. MacDenald ; President of the Council, Mr. Ross; Crown Lands, Mr. Vankoughnet; Post longer time. Terror of Greece! How would Master General, Mr. Smith; Receiver General, the first Academy have struggled under a prob-Mr. Sherwood—all except Messrs. Galt, Bel. longer time as vast as that when day and night flee leau, and Sherwood, members of the late Mac-Donald Administration—a Cabinet therefore of the same materials, to re-inaugurate the poli-movements. The periods named day and night cy so recently voted down by the Opposition. have become changeable and uncertain Canada is a political evaldron, well stirred just

And another :- How this greatest fact of the hour sweeps away the landmurks of existence heretofore! * * * * *

The ancient geographer drew his sketch of the Orbi Tecrurum in a small oval, concentric around Gteece, with Cimmerian darkness at the west, and Ethiopian night at the east, and to his loftiest conception there was no transmission of intelligence other than by the living messenger sent. Twenty-eight centuries later, his descend-ant may converse with the denizens of a new world at his antipodes—and to these colloquists midnight and noon are the same. The Horas are no longer gods of the hours, and time is no three parties in conversation, one may have high noon, one morning, and the third deep night. The business they transact must have a place in positive time, but which one claims the right to have it done at 6 o'clock A. M. ! Obviously The Republicans of the Fourth District, com-prising the counties of Auglaire, Miami, Darke, Shelby, &c., have nominated the Hon M. H. our time, and take our guides among eternal

What mighty results from small beginnings! received with enthusiasm. The convention putent for the "American Electro Magnetic Telgates being in attendance. The re-election of France, and in 1840 a patent in the United States. From this inception the work has advanced until the total length of telegraph lines The Fire Alarm Bells of Boston are now rung by telegraph, and the Traveler states that on Friday the Superintendent of the Boston connected with the fire alarm from the Boston connected with the fire alarm from the Superintendent of the Boston connected with the fire alarm from the Superintendent of the Boston connected with the fire alarm from the Superintendent of the Boston connected with the fire alarm from the Superintendent of the Boston connected with the fire alarm from the Superintendent of the Boston connected with the fire alarm from the Superintendent of the Boston connected with the fire alarm from the Superintendent of the Boston connected with the fire alarm from the Superintendent of the Boston connected with the fire alarm from the Superintendent of the Boston connected with the fire alarm from the Superintendent of the Boston connected with the fire alarm from the Superintendent of the Boston connected with the fire alarm from the Superintendent of the Superintendent of the Boston connected with the fire alarm from the Superintendent of the Boston connected with the fire alarm from the Superintendent of the Boston connected with the fire alarm from the Superintendent of the Boston connected with the fire alarm from the Superintendent of the Superintendent of the Boston connected from a long and minute account in the New York Times of Saturday. The despendence of the Superintendent of the S exceeds ONE HENDRED THOUSAND MILES, of

24 miles, across the Straits of Dover. The This extraordinary feat indicates the practica- wire soon chafed off on the rocks near the

World, but on the 11th, after the Niagara had material, will not exceed one shilling per hour. accessfully paid out 335 nautical miles, the cable broke. It gave way under the pressure applied, some distance from the ship's stern, applied, some distance from the ship's stern, up' the energies of those fleeter measurements, and sunk to the bottom at a depth of 2,000 electrical in nature, by the aid of which alone Columbus lost sight of the most Western High-lands of Europe,—which he was not to see again till he returned to give to Europe his gift of this New World. Three hundred and sixty

Company at once commenced operations for a twined about this iron centre; then comes Second Expedition. Plans were discussed, of a pairty partisan, playing into the hands of a she connects with the American shores the faction, and waging sar upon the rights and thread which gives Europe and America to each other. A majestic celebration of the great he connects with the american shores the thread which gives Europe and America to each other. A majestic celebration of the great he ro's faithful endeavor, at the end of a year of years after it was made!

Second Expendion. Plans were discussed, and it was decided to splice the cable in mid-occur, to provide a greater length, to improve ro's faithful endeavor, at the end of a year of years after it was made! and it was decided to splice the cable in midoccun, to provide a greater length, to improve the wires, and reaching the iron core, converts the paying out machinery, and to commence laying it earlier in the season. Seven hundred miles of new cable were provided, and on the 18th of May, 1858, the length of cable on the Agamemnon was 1,494 miles, and on the Niagara 1,510-making a total of 3,004 miles,-Tue 10th of June the Squadron sailed from Piymouth for the rendezvous in mid-ocean .-Storms and bad weather delayed operations so much that the first splice was not made till the side of the Atlantic, will of course have become somewhat faint and weak from the extent of the oms had been run out, when the cable was thrown off the wheel in the attempt to shift the Nigara's portion from one groove to another, and coming in contact with the tar-scraper it may sovered. The same day a new splice was sovered. The same day a new splice was a sovered with the cable will be here made continuous with a coil of wire, surrounding a bar of soft. made. When forty-two miles and three hundred fathoms had been paid out from the Niagara, and about the same from the Agamemnon. The electricians reported that the continuity had ceased. A third spice was made the evening of June 28th, and at 6 o'clock the night of the one direction, will be south when the current passes in one with a coil of wire, surrounding a bar of soft inch, which will become a temporary magnet, strong in proportion to the number of turns in the coil, whenever the current passes. This temporary magnet will have its precise polarity determined by the direction in which the electron and Bleached Sheeting and Shirtings, Summer Stuffs for Coats and Pauls, the current passes in one direction, will be south when the current passes in one direction, which will be north when the current passes in one direction, which will be south when the current passes in one direction, which will be come a temporary magnet, strong in proportion to the number of turns in the coil, whenever the current passes. This temporary magnet will have its precise polarity determined by the direction in which the elec-29th, communication again ceased, and at 11
P. M. the Ningara ecceed paying out. The agby the Company to effect this object is an im-

held a special meeting and resolved to make another attempt. The Expedition again sailed from Queenstown, July 18th, and at noon, August 5th, the country was startled with the unexpected intelligence that the Submarine Cable had been successfully laid. Such is a succinet history of the Land and Atlantic Telegraphs. Old and New Worlds are now within the reach of instant communication, and we append from the Times an interesting and instructive statement of how the Ocean Telegraph will be worked.

THE BATTERY TO BE USED IN TELEGRAPHING. The Figure of the Right of the bellin belin believed to the control of the contro

magnetic track which acience revealed to man. horizontal bar, turning pivot-ways on its own The mechanical construction of the cable was centre, and flattened at the top, could lift by an edge either of the acts of ten springs, right or left, as it was turned. This enabled the construction of the cable was constructed in the cable was constr and experiment. and experiment. So less than sixty two distributed through the entire longue ent kinds of rope were tested, before the cable was finally adopted. The conducting wire is a strand made up of seven wires of the purest copper, of the gauge known to the trade right or left set of springs—the right set, it will purest copper, of the gauge known to the trade COLUMBUS—FRANKLIN—MORSE—FIELD:

as No. 22. The strand itself is about the six—
tenth of an inch in diameter, and is formed of one straightly drawn wire, with six others graph Cable was successfully landed here yes—
tends morning, and is in perfect order. The length without giving away, and it is coated with gutta percha and tarred to insulate and disposed of finally, after sundry tentative atpreserve it.

The first attempt to lay the Ocean Cable was made in August, 1857. Twelve hundred and fifty miles were coiled in the Agamemnon, and then leaving this fine platina coil in constant communication with the opposite poles. The battery is unquestionably one of the most the other half in the Ningara, the weight being about 1200 tons on each vessel. August 5th, the end of the cable was landed at Valencia, form. It is calculated that the cost of maintaining the ten-celled battery in operation at the and made fast with pomp and ceremony. The telegraphic fleet bore away for the Western including all wear and tear, and consumption of

TRANSMISSION OF THE CURRENT. The primary voltaic current procured from this battery, with be used to "stimulate and call en.

The Directors of the Atlantic Telegraph

Several miles of this fine wire (No 20) are other coat of gutta-percha; then another coil of wire, thicker this time, (No. 14.) and 14 miles in length. The voltaic current, passing through magnetism having reproduced electricity, a transmissive power is obtained, which the ori-ginal current did not possess.

THE RECEIVING INSTRUMENT. The transmission current generated in these gregate of cable lost in the expedition was about 300 miles. Both ships returned to Queenstown, the Niagara arriving July 5th, the Agamemnon a week later.

The Directors of the Company in England held a special meeting and resolved to make the small permanent magnet traverse upon its almost frictionless pivot. On recount of this peculiarity of construction, it possesses the utmost sensibility. It may be put into vigorous action

THE RECORDING MACHINERY. The primary source of the influence which will be charged with the service of Atlantic Telegraphing, will be a giant voltage battery, of Professor Morse. In this recording instruten capacious cells, which may be appropriately ment, a ribbon of paper is carolled from a holtermed, the "Whitehouse Laminated or Perlow cylinder or drom by a train of clock-work,
